

Azure Virtual Desktop (AVD) Benefits for Business

Azure Virtual Desktop (AVD), formerly known as Windows Virtual Desktop (WVD), is a Microsoft Azure-based system that provides virtualized Windows desktops and applications in the cloud.

Scalability

Only pay for the infrastructure you need to support your business with the ability to grow or shrink on demand and achieve enterprise-grade infrastructure at an SMB price. Concierge CIO Partners has the expertise you need.

Security

Microsoft Azure has more security engineers protecting the infrastructure than any other data center in the world, and Azure has more certifications than any other data center available. Your M365 environment and data are safe.

Remote Access

Protect your organization from situations that require your staff to work remotely. With AVD, every employee would have the same access to all their data and applications from anywhere in the world the same way they would in the office or on company-managed laptops.

Increase the productivity of your current staff with the ability to work when and where they want and start hiring top talent without any geographic restrictions by having your systems fully in Microsoft Azure.

Cost Savings

Stop paying for outdated or expensive servers that may not even be in use for most of the day and/or are sitting idle, taking up valuable space.

Eliminate the worry surrounding backup power or HVAC systems in the office and dramatically lower your costs of physical devices since all the processing is being done in the cloud. Managing a fleet of laptops for contractors and remote users is no longer necessary.
